RESIDENTIAL CIRCULAR DRIVEWAY EXTENSION

LOCATION: Orlando, Florida

PROJECT CHALLENGE: A residential circular-driveway extension needed a site drawing that reflected the existing approach, proposed paver areas and local driveway-width constraints.

VERIFIED DRAWING SCOPE: Site-plan annotations distinguishing existing and proposed driveway/walkway areas, proposed paver extension, exit geometry and associated dimensions.

SOURCE RECORDS: Client correspondence referencing Orlando Code Section 61.302(D), project site-plan revisions and client requests for markup confirmation.

REVISION / COORDINATION: Following the client review, the exit was reduced from 12 feet to 8 feet to address the stated 26-foot combined-width concern. The client was asked to mark up the PDF to confirm the intended change.

CURRENT STATUS: Revised driveway drawing work documented; final client acceptance, city approval and construction are not independently verified.

PRACTICAL TAKEAWAY: Check combined curb-cut or driveway width early and confirm the exact revision on a marked-up site plan before assuming local compliance.

ILLUSTRATION IS CONCEPTUAL, NOT A SURVEY OR APPROVED DRAWING.

Local code coordination: The owner cited Orlando Code Section 61.302(D) concerning driveway design.

Combined width: A 26-foot combined driveway width limit was identified in project correspondence.

Exit revision: The proposed exit width was revised from 12 feet to 8 feet after the client flagged the combined-width issue.

Paver scope: The planned extension used pavers, with a small exit segment beyond the sidewalk addressed in revision notes.
